

Antiskid Resin Floor Care and Maintenance

Resin floors are tough resilient systems, however, for the performance characteristics of the floor to be maintained, an appropriate cleaning regime should be agreed in advance.

The cleaning regime will itself be determined by a number of factors, the type of resin flooring installed, the type and frequency of traffic, the degree and type of soiling and specific hygiene requirements.

Antiskid provides after-sales support and can design a cleaning procedure to suit every environment and application. Antiskid are suppliers of premium detergents and cleaning products. For hard to clean environments Antiskid offers a selection of highly concentrated detergents for daily cleaning and heavily soiled build up removal.

We have a range of floor cleaning products and machines suitable to maintain all our flooring systems, including food production environments.

The range includes:

- Specifically manufactured environmentally friendly cleaning chemicals
- Latest motorised walk behind and ride-on wet scrubbing machines
- Latest motorised walk behind and ride-on sweeping machines

Antiskid can provide a complete maintenance package to suit all your needs.

- Specialised advice
- Complete range of sweeper and scrubbers
- Latest design in walk behind and ride-on equipment
- Easy to use and maintain, saving time and money
- Range of cleaning chemicals
- Cleaning procedures and MSDS
- Environmentally friendly products

Floors which are kept clean will last longer. Fine particles of dust, dirt, debris, act as abrasives with traffic unless the floor is cleaned regularly. For the pharmaceutical, cosmetic and food industries it is particularly important to maintain hygienic surfaces, proper cleaning techniques are essential.

When cleaning it is essential that the removal of dirty water and rinsing of the floor are the key to successful cleaning. It is important that clean water is used for rinsing.
