Requirements:
The new Mooka state-of-the-art ore-car repair shop, office and warehouse building required epoxy resin high build coating to withstand extreme heavy duty from the 10 tonne AGV (Automated Guiding Vehicles) traffic. A degree of slip resistance and colourful, clearly marked demarcation walkways, line marking and service demarcation areas requirement was significant and important because of the crosswalks where pedestrians versus the automatic guiding vehicles traffic is clearly marked and identified.

Solution:
Antiskid is an expert in installing epoxy resin high build coatings for heavy duty industrial flooring having been commissioned to install many industry sectors in Western Australia.
Antiskid in consultation with McConnell Dowell, the construction company specified 2 coats of coloured epoxy roll coat and a mild slip resistant finish to the final coat to ensure a standard of R10 slip resistance. Colourful demarcation areas were specified for which Antiskid Industries has extensive experience having carried out such work at many large commercial and industrial projects throughout the State.
Antiskid Industries completed the work with minimal disruption, on-time and to budget.

Products used:
Parchem Durafloor HP

Project details:
Date: February 2016
Location: Mooka
Construction: McConnell Dowell
Contractor: Antiskid Industries
