

Bob Hawke College

Fashionable and robust modern, contemporary and seamless flooring.
Easily maintained and durable in virtually any design or pattern.

Project Brief: Stage 2 of this prestigious inner city school specified a luxurious bonded terrazzo flooring system with stylish surface suited for high traffic areas such as the entrance areas and entrances to the theatre. Antiskid were engaged to provide an appropriate solution which needed to be aesthetically pleasing, long lasting, easily maintainable whilst providing long term slip resistant qualities.

Solution: Antiskid Industries recommended installing the Mondéco resin-based terrazzo flooring system. A creative blend of locally sourced marble aggregates are incorporated into the resin matrix, creating a modern and contemporary platform underfoot. The luxurious Mondéco range offers superior design flexibility, allowing architects, designers and end users the ability to create bespoke designs and patterns across the floor with high durability and abrasion resistance. All whilst having the strength to stand up to heavy traffic as well as any other issues such as spillages. And the Terrazzo system delivers a

joint-free, easily cleaned finish - with no cracks or crevices to harbour dirt or dust.

This solution is low maintenance and will continue to be a dynamic feature for many years to come with minimal maintenance requirements for the stakeholders.

A Mondéco resin-based terrazzo flooring system really does deliver the Wow factor.

All told, an outstanding solution.
