

Westrac Commercial Showrooms. Decorative finish, clean, bright and slip resistant. Commercial flooring.

Antiskid at Work

Requirements:

After 50 years of operating out of the previous facility, WesTrac's parts and sales operation has moved to a new purpose built building located on Hyne Road, South Guildford. It's a new state-of-the-art facility centralising six operations under one roof.

One of these, the Sales and Parts Warehouse required a state-of-the-art flooring solution to complement the new building as well as ensure a safe environment for both staff and customers alike.

Solution:

Antiskid Industries in conjunction with the Architect recommended Flowcrete Mondeco polymer epoxy flooring be installed to provide an attractive, safe and functional environment. From the wide variety of Flowcrete textured finishes and coordinating with the interior design, a bright, clean, slip resistant modern decorative architectural designed Terrazo seamless resin floor surface was chosen, suitable to accommodate the levels of expected pedestrian traffic loads.

Antiskid has installed a great number of architecturally designed seamless resin floor surfaces to commercial and residential properties, some of which include:

- Display areas
- Retail stores and shop fronts
- Housing developments
- Shopping centres
- Building entrances
- Commercial buildings
- Entertainment and sport centres
- Healthcare

Product used:

Flowcrete commercial resin flooring
