

Chemtec

Slip Resistant Tile Treatment

Ceramic, quarry and terrazzo tiles are a common surface finish, however generally provide poor slip resistance when wet and are a Safety hazard.

Antiskid Chemtec is a specially formulated chemical treatment that modifies the tile surface providing a textured finish that increases the friction between the foot and the tile surface.

Chemtec treatments require no curing period and surfaces are available for use immediately after completion of treatment. Furthermore, Chemtec provides a PERMANENT solution to slippery tiles *providing our recommended housekeeping practices are observed.*

Antiskid provides after-sales support and can design a cleaning procedure to suit every environment and application. Antiskid are suppliers of premium detergents and cleaning products.

PRODUCT DESCRIPTION

Antiskid Chemtec is a clear chemical treatment designed to react with most mineral surfaces. The surface texture is microscopically altered increasing the coefficient of friction (COF), thereby increasing the resistance to slip.

FEATURES

- No mess or disturbing after smell
- Suitable for food preparation areas
- Professional installation
- No curing or drying time
- Provides a PERMANENT solution
- Will not peel or delaminate
- Periodic heavy cleaning service available

PROMPT AND EFFICIENT SERVICE

Antiskid Floor Safety Division includes mobile service vehicles covering the metro area. All our applicators are fully trained in our products and customer service. We pride ourselves on providing fast and thorough service. Regional applications by appointment.
