Enhance, protect and improve safety with slip resistant high visibility demarcation colours

Antiskid are the leading installer of high friction and coloured surface treatments, engineered to a diverse range of civil engineering and construction requirements. At Antiskid we work with our clients to develop and formulate fit for purpose surfacing systems to meet the stringent demands in the following areas:

- **Highways and Roads** - High performance coloured and high friction surfacing treatments for all classes of roads and highways
- **Bridges** – Bridge decks constructed of steel, concrete or timber require protection from the elements
- **Car Parks** – technologically advanced resin systems formulated for waterproofing and surfacing of all car park and elevated constructions
- **Landscaping** – attractive, slip resistant surface treatments and finishes designed to enhance and improve the visual amenity of landscape design
- **Commercial** – suitable for pedestrian, vehicular, forklift and mobile plant environments, enhancing occupational health and safety in commercial and industrial environments
- **Public Transport** – Internal and external applications utilise slip and skid resistant surfacing systems for pedestrian and vehicular traffic. Ideal for demarcation surfacing in the rail, bus and cycle path environment

Enhance, protect and improve safety with slip resistant high visibility demarcation colours

**Antiskid High Friction Surfacing**
A high friction veneer surfacing system designed to improve and maintain high levels of skid resistance on asphalt or concrete roads, highways and bridges. It is primarily used at intersections, roundabouts, school and pedestrian crossings, black spot locations, tight radius corners and for general improvement of skid resistance to existing pavements.

**Benefits**
- Hi Friction # SRV > 70
- Increased surface texture
- Up to 33% reduction in vehicle braking
- Reduced distances
- Reduced threshold braking speeds
- Fuel and oil resistant
- Accident reduction
- Concrete / asphalt surface

**Antiskid Colour Surface Treatment**
Designed to provide high visibility coloured pavements that ensure safer colour delineation whilst maintaining high skid resistance in both wet and dry conditions. For on road applications, highways and bridge pavements. General uses include bus and cycle lanes delineation, transit and emergency services on road lanes, pedestrian and school crossings and speed zone identification.

**Benefits**
- Visible demarcation
- Extremely durable
- Fuel and oil resistant
- Improved surface friction
- Solvent free
- Proven accident reduction
- Guaranteed installation
- Extensive reference lists

**Antiskid Decorative Surfacing**
Add colour, contrast and high visibility with this unique slip resistant, low maintenance surfacing system providing a decorative and complimentary surface finish to landscape design. Uses extend, but are not limited to, shared pathways, streetscape design, pedestrian and shopping centre precincts, LATM schemes, centre medium delineation and car parks.

**Benefits**
- Aesthetically pleasing finishes
- Highly durable
- Suitable for concrete and asphalt
- Low maintenance
- Skid resistant
- Uniform seamless finish
- Excellent colour stability
- Extensive range of aggregate dressings
- Guaranteed product performance
